

Place Value

Goal Model numbers up to 10 000.

1. Suppose you used only 1 type of block to model each number. How many hundreds blocks would you need? How many thousands blocks would you need?

- a) 1000 10 hundreds or 1 thousands
 b) 3000 30 hundreds or 3 thousands
 c) 8000 80 hundreds or 8 thousands

2. Write the number for each.

a)  3426

b)  2107

c)  1095

3. A school collected 2724 cans for the canned food drive by the end of November.

- a) Which blocks would you use to model 2724 with the least

number of blocks? 2 thousands blocks, 7 hundreds blocks,

2 tens blocks, 4 ones blocks

- b) Imagine that blocks are added to include 100 more cans collected each week for 4 weeks. Which blocks would be added?

4 hundreds blocks

- c) Imagine that blocks are traded so the model uses the least number of blocks. Which blocks would change? Why?

2 thousands 11 hundreds would become 3 thousands 1 hundred because

10 hundreds blocks can be traded for 1 thousands block.

At-Home Help

Base ten blocks are often used to **model** or represent place value concepts.

 represents one.

 represents ten.

 represents one hundred.

 represents one thousand.

For example, 2465 can be modelled as

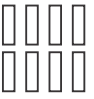

Expanded Form

Goal

Write numbers up to 10 000 in expanded form.

1.

Thousands	Hundreds	Tens	Ones
2	1	8	4
			

Write the modelled number

a) in standard form 2184

b) in expanded form using numbers

$$2000 + 100 + 80 + 4$$

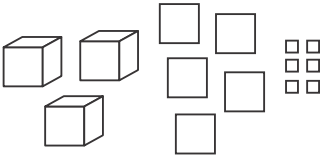

c) in expanded form using words 2 thousands + 1 hundred + 8 tens + 4 onesd) as you would read it 2 thousand 1 hundred eighty-four

2. Write each number in expanded form using words.

a) 6734 6 thousands + 7 hundreds + 3 tens + 4 onesb) 3208 3 thousands + 2 hundreds + 8 onesc) 9777 9 thousands + 7 hundreds + 7 tens + 7 ones

3. Write each number in standard form.

a)

3506

b) $8000 + 800 + 80 + 8$ 8888c) $7 \text{ thousands} + 6 \text{ tens} + 2 \text{ ones}$ 7062

At-Home Help

When a number is written in the usual way, for example 4675, it is in **standard form**.

In **expanded form**, 4675 is written as

$4000 + 600 + 70 + 5$ or as
4 thousands + 6 hundreds +
7 tens + 5 ones.

We read 4675 as 4 thousand
6 hundred seventy-five.

Comparing and Ordering Numbers

Goal Compare and order numbers up to 10 000.

1. Here are the masses of some heavy animals.

elephant
6168 kg

giraffe
1364 kg

rhinoceros
2273 kg

baby whale
3636 kg

bison
1182 kg

hippopotamus
3207 kg

At-Home Help

When comparing numbers, you can use the symbols $<$ and $>$. The symbol $<$ means that the 1st number is less than the 2nd number.

The symbol $>$ means that the 1st number is greater than the 2nd number.

The symbols $<$ and $>$ always point to the lesser number (e.g., $1805 < 5920$ and $5920 > 1805$).

- a) Which animal is the heaviest? Explain how you know. The elephant is the heaviest. The mass of the elephant has the greatest thousands digit.
- b) Which animals have a mass of between 2000 kg and 4000 kg? rhinoceros, baby whale, hippopotamus
- c) Which animal is heavier, the giraffe or the bison? Explain how you know. The giraffe is heavier. Both have a 1 in the thousands place, but the hundreds digit is greater in the mass of the giraffe.
- d) Order the animals from lightest to heaviest. bison, giraffe, rhinoceros, hippopotamus, baby whale, elephant

2. Complete by using $<$, $=$, or $>$.

- a) $8882 \geq 987$ b) $2815 < 2968$ c) $6200 < 8602$ d) $5432 \geq 4523$

3. Write each set of numbers in order from least to greatest.

- a) 7450, 6871, 7531, 784 784, 6871, 7450, 7531
- b) 5871, 5873, 5997, 5888 5871, 5873, 5888, 5997

Exploring 10 000

Goal

Explore place value patterns to 10 000.

1. Write the first 5 numbers in each pattern.

- a) The pattern starts with 6 thousands.
The number of thousands increases by 1 for each number.

6000, 7000, 8000, 9000, 10 000

- b) The pattern starts with 9 thousands + 9 hundreds + 8 tens.
The number of ones increases by 5 for each number.

9980, 9985, 9990, 9995, 10 000

- c) The pattern starts with 9 thousands + 9 hundreds + 2 tens.
The number of tens increases by 2 for each number.

9920, 9940, 9960, 9980, 10 000

- d) The pattern starts with 9 thousands + 2 hundreds.
The number of hundreds increases by 2 for each number.

9200, 9400, 9600, 9800, 10 000

2. Complete each pattern by filling in the missing numbers.

a) 5000, 6000, 7000, 8000, 9000, 10 000

b) 2000, 4000, 6000, 8000, 10 000

c) 9960, 9970, 9980, 9990, 10 000

d) 9750, 9800, 9850, 9900, 9950, 10 000

e) 9995, 9996, 9997, 9998, 9999, 10 000

f) 9990, 9992, 9994, 9996, 9998, 10 000

At-Home Help

These numbers show skip counting by 20s: 9900, 9920, 9940, 9960, 9980.

The pattern can be described as starting at 9 thousands + 9 hundreds with the tens digit increasing by 2 for each number.

Multiplying by 10, 100, and 1000

Goal Multiply by 10, 100, and 1000.

1. Multiply.

a) $7 \times 10 = \underline{70}$ c) $50 \times 10 = \underline{500}$

b) $29 \times 10 = \underline{290}$ d) $321 \times 10 = \underline{3210}$

2. What pattern do you see in your answers to Question 1? There is a zero at the end of

each number that is multiplied by 10.

3. Multiply.

a) $5 \times 100 = \underline{500}$

c) $70 \times 100 = \underline{7000}$

b) $38 \times 100 = \underline{3800}$

d) $100 \times 100 = \underline{10\,000}$

4. What pattern do you see in your answers to Question 3? There are 2 zeros at
the end of each number that is multiplied by 100.

5. Multiply.

a) $2 \times 1000 = \underline{2000}$

c) $9 \times 1000 = \underline{9000}$

b) $5 \times 1000 = \underline{5000}$

d) $10 \times 1000 = \underline{10\,000}$

6. What pattern do you see in your answers to Question 5? There are 3 zeros at
the end of each number multiplied by 1000.

7. What is the missing number?

a) $3000 = \underline{3} \times 1000$

c) $6000 = \underline{6} \times 1000$

b) $3000 = \underline{30} \times 100$

d) $6000 = \underline{60} \times 100$

8. What is the missing number?

a) $4290 = \underline{429} \times 10$

c) $7500 = \underline{750} \times 10$

b) $3060 = \underline{306} \times 10$

d) $9000 = \underline{900} \times 10$

At-Home Help

When you multiply 3, for example, by 10, you have 3 groups of 10.

There are 3 tens and 0 ones.
So $3 \times 10 = 30$.

Rounding to the Nearest 10, 100, or 1000

Goal
Round numbers to the nearest 10, 100, or 1000.

- There are 4906 grade 4 students in the Ottawa-Carleton school district. Round this number to
 - the nearest thousand _____ 5000 _____
 - the nearest hundred _____ 4900 _____
 - the nearest ten _____ 4910 _____
- Draw a number line to show how you would round the greatest depth of the Atlantic Ocean to the nearest thousand.

Ocean/Sea	Greatest depth (m)
Indian Ocean	7455
Atlantic Ocean	9219
Arctic Ocean	5625
Caribbean Sea	6946

- What is the greatest depth of the Indian Ocean rounded to the nearest thousand? _____ 7000 _____
- What is the greatest depth of the Indian Ocean rounded to the nearest hundred? _____ 7500 _____
- What is the greatest depth of the Arctic Ocean rounded to the nearest thousand? _____ 6000 _____
- What is the greatest depth of the Arctic Ocean rounded to the nearest hundred? _____ 5600 _____
- Explain why the greatest depths of the Caribbean Sea and the Indian Ocean are both 7000 m when rounded to the nearest thousand.

The greatest depth of the Caribbean Sea is less than 7000 m, but it is closer to 7000 m than to 6000 m. The greatest depth of the Indian Ocean is more than 7000 m, but it is closer to 7000 m than to 8000 m.

At-Home Help

There are times when it is useful to use approximate numbers. One way to do this is to **round** numbers to the nearest 10, 100, or 1000. To do this, find the multiple of 10, 100, or 1000 that the number is closest to.

2462 rounded to the nearest thousand is 2000.

2462 rounded to the nearest hundred is 2500.

2465 rounded to the nearest ten is 2470.

Communicate About Ordering Numbers

Goal

Explain how to order a set of numbers in a complete, clear, and organized way.

1. Match the letters of the explanations in the boxes below to these number patterns. If you correctly match the patterns to their explanations, the letters going down will spell the number of patterns you matched.

- | | | |
|---------------------------|-------|---|
| a) 8808, 8008, 888, 808 | _____ | F |
| b) 180, 295, 592, 801 | _____ | O |
| c) 1000, 5308, 5803, 8500 | _____ | U |
| d) 8, 81, 808, 8808 | _____ | R |

At-Home Help

The following terms help describe how a set of numbers is ordered.

digits: The digits in our number system are 0, 1, 2, 3, 4, 5, 6, 7, 8, and 9.

numbers: Combinations of the digits are numbers (e.g., 43, 895, and 2067).

place value: A digit takes on a value determined by the place it occupies in a number.

In the number **45**, the digit 5 is in the ones place. Its value is 5.

In the number **251**, the digit 5 is in the tens place. Its value is 50.

In **530**, the 5 is in the hundreds place. Its value is 500.

In **5296**, the 5 is in the thousands place. Its value is 5000.

R

I ordered the numbers from least to greatest with the 1-digit number first, then the 2-digit number, then the 3-digit number, and finally the 4-digit number.

F

I ordered the numbers from greatest to least. The first 2 numbers have 4 digits. I compared their hundreds digits to decide which number is greater. The last 2 numbers have 3 digits. I compared their tens digits to decide which number is greater.

U

I looked at the digit in the thousands place and wrote the numbers from least to greatest. For the 2 numbers that have the same thousands digit, I looked at the digit in the hundreds place to decide which is the least.

O

All of the numbers have 3 digits. I ordered the numbers from least to greatest by looking at the digit in the hundreds place.

Counting Money Collections

Goal
Estimate, count, and write money amounts up to \$50.00.

1. a) Estimate how much money Hannah has.

Answers will vary. For example, \$37.00.

- b) Find the actual amount.

\$37.90

At-Home Help

When counting money some regrouping is the same as place value regrouping.

1 ten-dollar bill = 10 loonies

1 loonie = 10 dimes

1 dime = 10 pennies

Some regrouping is different.

1 ten-dollar bill is also equal to 2 five-dollar bills or 5 toonies.

1 loonie is also equal to 4 quarters or 20 nickels.

1 quarter is also equal to 2 dimes and 1 nickel, or 5 nickels, or 25 pennies.

1 dime is also equal to 2 nickels or 1 nickel and 5 pennies.

1 nickel is equal to 5 pennies.

2. Describe bills and coins to make \$5.00 in 3 different ways.

Answers will vary. For example:

way 1: 1 \$5 bill

way 2: 2 toonies, 1 loonie

way 3: 5 loonies

3. Hong has 1 twenty-dollar bill, 1 five-dollar bill, 8 quarters, 8 dimes, 1 nickel, and 4 pennies.

Answers will vary.

- a) Estimate the total amount of money he has. For example, \$28.00.

- b) Find the actual total. \$27.89

4. How would you make \$22.35 using the fewest bills and coins?

1 \$20 bill, 1 toonie, 1 quarter, 1 dime

Test Yourself

Circle the correct answer.

1. Write the number for these base ten blocks.

A. 317

C. 3107

B. 3170

D. 3017

2. Write 8945 in expanded form.

E. $8000 + 900 + 40 + 5$

G. $8 + 9 + 4 + 5$

F. $8000 + 9000 + 400 + 5$

H. $89 + 45$

3. My thousands digit is 1 more than my hundreds digit.
The sum of my thousands digit and hundreds digit is 3.
My thousands digit is the same as my ones digit.
My hundreds digit is the same as my tens digit.
What number am I?

A. 3003

B. 3030

C. 2121

D. 2112

4. Complete by choosing the correct number: $2365 > \blacksquare$

E. 2425

F. 6523

G. 1365

H. 2565

5. Multiply: $1000 \times 10 = \blacksquare$

A. 1000

B. 100

C. 10 000

D. 100 000

6. There are 365 days in 1 year. How many days are in 10 years?

E. 365

F. 3650

G. 10 000

H. 36 500

7. What number is 1928 rounded to the nearest hundred?

A. 100

B. 1930

C. 2000

D. 1900

8. Find the total amount for 1 twenty-dollar bill, 1 ten-dollar bill, 1 five-dollar bill, 3 quarters, 1 dime, and 1 nickel.

E. \$36.15

F. \$30.90

G. \$35.95

H. \$35.90

9. There are 20 quarters, 5 dimes, 5 nickels, and 5 pennies in a jar.
How much money is in the jar?

A. \$5.80

B. \$50.80

C. \$6.80

D. \$5.25
